ARPANET

Email (electronic mail) is the exchange of computer-stored messages by telecommunication. Email messages are usually encoded in American Standard Code for Information Interchange (ASCII) text. However, you can also send nontext files -- such as graphic images and sound files -- as attachments sent in binary streams. Email was one of the first activities performed over the internet and is still the most popular use. A large percentage of the total traffic over the internet is email. Email can also be exchanged between online service provider users and in networks other than the internet, both public and private.

## Popular email services

Some examples of popular free email websites include the following:
