

Ques. Write notes on find and seek command.

:- Both find and seek command work on index or sorted file. These command take the control to the first record containing the given value with them.

For ex = Find "Ram" or Seek "Ram"

While take control to the first record in while name fields, contains the value "Ram". They are use for faster file processing.

Difference:-

find works only with given constant or value it does not work with variable where as seek works with both variable as well as values. The above program is example that.

use

Find

use bcq  
Index on class to A1  
find "bcq 1"  
Do while class = "bcq 1"  
? name, class, roll

Q. Wap to print records of class as entered by the user.

:- m class = space (6)

Input "Enter which class" to m class  
use bcq  
Index on class to A1  
Seek m class

&& find can't work with variable  
Do while class = m class

? name, class, roll  
SKIP  
ENDDO  
use

Q. Wap to print records of student who are from class BCAI.

```
:- Seek          use bca
Index on class to AI
Seek "bca I"
Do while class = "bca I"
? Name, class, Roll
SKIP
ENDDO
```
