# Flowchart

A flowchart is a graphical or pictorial representation that uses symbols to show the operations and decision to be followed by computer in solving a problem.

In other words we can say that the flow chart like a road map which provides the details description of the flow of processing of data.

## A flow chart also serve as

1. An efficient means of communication.
2. An analytical tool
3. A concise form of documentation.

With the help of flow chart a programmer can show a series of alternative approach to a problem.

There are various flow chart symbols suggested by ANSI.

| Symbol | Name | Function |
|--------|------|----------|
|        |      |          |
