Distinguishing between scanf() and gets() functions:

scanf()	gets()
Strings with spaces cannot be accessed until ENTER key is pressed.	Strings with any number of spaces can be accessed.
All data types can be accessed.	Only character data type can be accessed.
Spaces and tabs are not acceptable as a part of the input string.	Spaces and tabs are perfectly acceptable of the input string as a part.
Any number of characters, integers.	Only one string can be received at a time. Strings, floats can be received at a time.

### Key Terms & Concepts

The list of terms below is provided to supplement or elaborate on the boldfaced terms and definitions provided in the course textbook. Students are advised to also review the textbook to develop a fuller understanding of these and other important terms related.

**Text** is a form of data consisting of characters such as letters, numerals, and punctuation.
